

THX 160

Monopolar X-ray tubes

New

- Water-cooled anode
- 160 kV operating voltage
- Compact and easy plug-in
- Robust design for long life expectancy
- Fully compatible with most generators

THX 160

The THX 160 X-ray monopolar tubes are based on Thales advanced metal-ceramic technology. The ceramic's dielectric strength provides a high reliability and a long life expectancy within a compact and light design to facilitate OEM integration.

Featuring a water-cooled anode and a tungsten cathode with direct heating, THX 160 tubes generate high-energy X-rays (450 - 4 000 W) with various focal spots from 0.2 to 5.5 mm.

Special available versions:

- G: stable emission for gauging,
- Custom-designed solutions.

Typical applications include in-line food inspection, continuous gauging, non-destructive testing, baggage screening and explosive detection systems.

All these products are designed, developed and manufactured at an ISO 9001:V2000 and ISO 14001 certified production facility.
